

CommonTime mSuite5 v5.10: Release Notes

This version can be used for new mSuite5 installations or for upgrading existing mSuite5 installations. It can NOT be used to upgrade existing mSuite 4.3.x installations.

If you are currently using mSuite version 4.3 (or earlier), please contact CommonTime (or your accredited CommonTime partner) to plan your upgrade to mSuite5. Please note, support for mSuite version 4.x ceases on December 31st, 2009.

The platform sections below indicate where each new function and/or fix has been implemented – not necessarily where it takes effect. For example, a change to a server software module can affect client behaviour and vice versa. The objective of the sections below is to indicate where the upgrade must be applied to realize the new functionality or fix. You should, however, always upgrade all server(s) before upgrading any clients (mobile devices).

NOTE: These release notes relate solely to this version - they do not include new functionality or bug fixes that were shipped in earlier versions of mSuite5.

New Functionality

Symbian Series 60 3rd Edition client

- No new functionality in this version.

Windows Mobile client

- Support for Windows Mobile 6.5 devices

Exchange Adapter (for Exchange ActiveSync clients)

- [4045] Exchange ActiveSync (EAS) devices can now connect via the CommonTime Switching Center (CSC)
- Support for Symbian Series 60 3rd and 5th edition devices as EAS clients.

Other Server Software and Administration

- No new functionality in this version.

Fixes

Symbian Series 60 3rd Edition client

- No fixes in this version.

Windows Mobile client

- [4469] The mNotes menu in the Inbox did not work correctly on WM 6.1.4 Standard devices.

Exchange Adapter (for Exchange ActiveSync clients)

- [4470] MIME messages sent from an iPhone were not always correctly encoded.
- [4491] Certain types in MIME messages could cause mail replication to fail.
- [4492] Could not download attachments if HTML mail settings ('Prefers MIME' and 'Convert MIME to attachment') were active.
- [4501] Notes authentication could fail if the username didn't match the shortname.
- [4516] Replication could time out if the connection from the mSuite server to the mail server was slow.

Other Server Software and Administration

- [4337] In the admin console, clearing current modifications also removed the user's Notes name.
- [4513] Some email attachments could not be downloaded to the mobile device.
- [4488] In version 5.09, an enterprise (or local) proxy would not route non SSL device connections.
- [4497] CdzMime.html attachments would not download to WM and Symbian devices.
- [4500] EAS security policies were sometimes applied to the wrong users/groups.
- [4502] Fixed a memory leak in the mNotes server.
- [4517] Sending a large email message (e.g. one with an attachment) would sometimes fail if the device was using SSL and connecting via the CSC.
- [4522] Empty credentials could cause an mNotes server crash.
